

SQL Server 2017 multidimensional mode needed

Asked 3 years, 3 months ago Active 2 years ago Viewed 10k times

5

MS SQL Server 2017 (developer edition) is connected and running on my PC. However, when I want to start the develop process in MS Visual studio 2017, it is giving me the following error:

You cannot deploy the model because the localhost deployment server **is not running in multidimensional mode.**

I tried reinstalling MS SQL server with additional features, but I cannot find this multidimensional option . I googled some articles and they solved it in older versions of MS VS, however, they are not helpful in MS VS 2017. Please, give some suggestions.

sql sql-server sql-server-2017

- Can you give more detail on what is this "develop" process you are trying to start is? – Bradley Uffner Jan 25 '18 at 23:29
- I am trying to build an OLAP cube. – Said Akbar Jan 27 '18 at 0:02
- any ideas? @BradleyUffner – Said Akbar Jan 27 '18 at 21:49
- That mode is selected at installation time of the instance and can't be changed as far as I know. You will need to reinstall analysis services with that option, or add a new instance with it selected. – Bradley Uffner Jan 27 '18 at 21:52

Well, it turns out I did not need to re-install the instance. Instead, I had to change msmdsrv.ini in C:\Program Files\Microsoft SQL Server\MSAS14.MSSQLSERVER\OLAP\Config . The line <DeploymentMode>2</DeploymentMode> in the file (2 means tabular) should be changed to <DeploymentMode>0</DeploymentMode> . After restarting the analysis server, I finally managed to run the server in multidimensional mode .

Nice one bro. Just a word to the wise: close your SQL manager first and open this ini file in admin mode. –
