No CAPTCHA reCAPTCHA

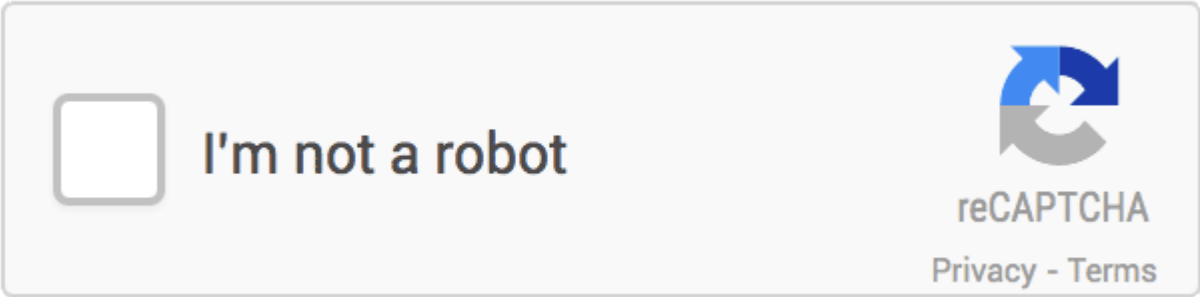

build passing

stable 3.3.0

downloads 2.62 M

unstable v2.x-dev

license MIT

For Laravel 4 use [v1](#) branch.

Installation

```
composer require anhskohbo/no-captcha
```

Laravel 5 and above

Setup

NOTE This package supports the auto-discovery feature of Laravel 5.5 and above, So skip these Setup instructions if you're using Laravel 5.5 and above.

In `app/config/app.php` add the following :

1- The ServiceProvider to the providers array :

```
Anhskohbo\NoCaptcha\NoCaptchaServiceProvider::class,
```

2- The class alias to the aliases array :

```
NoCaptcha => Anhskohbo\NoCaptcha\Facade\NoCaptcha::class
```

☰ README.md

3- Publish the config file

```
php artisan vendor:publish --
provider="Anhskohbo\NoCaptcha\NoCaptchaServiceProvider"
```

Configuration

Add `NOCAPTCHA_SECRET` and `NOCAPTCHA_SITEKEY` in `.env` file :

```
NOCAPTCHA_SECRET=secret-key
NOCAPTCHA_SITEKEY=site-key
```

(You can obtain them from [here](#))

Usage

Init js source

With default options :

```
{!! NoCaptcha::renderJs() !!}
```

With [language support](#) or [onloadCallback](#) option :

```
{!! NoCaptcha::renderJs('fr', true, 'recaptchaCallback') !!}
```

Display reCAPTCHA

Default widget :

```
{!! NoCaptcha::display() !!}
```

With [custom attributes](#) (theme, size, callback ...) :

```
{!! NoCaptcha::display(['data-theme' => 'dark']) !!}
```

Invisible reCAPTCHA using a [submit button](#):

```
{!! NoCaptcha::displaySubmit('my-form-id', 'submit now!', ['data-theme' => 'dark']) !!}
```

Notice that the id of the form is required in this method to let the autogenerated callback submit the form on a successful captcha verification.

Validation

Add 'g-recaptcha-response' => 'required|captcha' to rules array :

```
$validate = Validator::make(Input::all(), [  
    'g-recaptcha-response' => 'required|captcha'  
]);
```

Custom Validation Message

Add the following values to the `custom` array in the `validation` language file :

```
'custom' => [  
    'g-recaptcha-response' => [  
        'required' => 'Please verify that you are not a robot.',
```

```

        'captcha' => 'Captcha error! try again later or contact site admin.',
    ],
],

```

Then check for captcha errors in the Form :

```

@if ($errors->has('g-recaptcha-response'))
    <span class="help-block">
        <strong>{{ $errors->first('g-recaptcha-response') }}</strong>
    </span>
@endif

```

Testing

When using the [Laravel Testing functionality](#), you will need to mock out the response for the captcha form element.

So for any form tests involving the captcha, you can do this by mocking the facade behavior:

```

// prevent validation error on captcha
NoCaptcha::shouldReceive('verifyResponse')
    ->once()
    ->andReturn(true);

// provide hidden input for your 'required' validation
NoCaptcha::shouldReceive('display')
    ->zeroOrMoreTimes()
    ->andReturn('<input type="hidden" name="g-recaptcha-response" value="1" />');

```

You can then test the remainder of your form as normal.

When using HTTP tests you can add the `g-recaptcha-response` to the request body for the 'required' validation:

```

// prevent validation error on captcha
NoCaptcha::shouldReceive('verifyResponse')
    ->once()
    ->andReturn(true);

// POST request, with request body including g-recaptcha-response
$response = $this->json('POST', '/register', [
    'g-recaptcha-response' => '1',
    'name' => 'John',

```

```
'email' => 'john@example.com',  
'password' => '123456',  
'password_confirmation' => '123456',  
]);
```

Without Laravel

Checkout example below:

```
<?php  
  
require_once "vendor/autoload.php";  
  
$secret = 'CAPTCHA-SECRET';  
$sitekey = 'CAPTCHA-SITEKEY';  
$captcha = new \Anhskohbo\NoCaptcha\NoCaptcha($secret, $sitekey);  
  
if (! empty($_POST)) {  
    var_dump($captcha->verifyResponse($_POST['g-recaptcha-response']));  
    exit();  
}  
  
?>  
  
<form action="?" method="POST">  
    <?php echo $captcha->display(); ?>  
    <button type="submit">Submit</button>  
</form>  
  
<?php echo $captcha->renderJs(); ?>
```
