downloads 2.9M packagist v8.0.1 license LGPL-3.0

This is a barcode generation package inspired by <https://github.com/tecnickcom/TCPDF>. Actually, I use that package's underline classes for generating barcodes. This package is just a wrapper of that package and adds compatibility with Laravel 5.

I used the following classes of that package.

- src/Milon/Barcode/Datamatrix.php (include/barcodes/datamatrix.php)
- src/Milon/Barcode/DNS1D.php (tcpdf_barcodes_1d.php)
- src/Milon/Barcode/DNS2D.php (tcpdf_barcodes_2d.php)
- src/Milon/Barcode/PDF417.php (include/barcodes/pdf417.php)
- src/Milon/Barcode/QRcode.php (include/barcodes/qrcode.php)

[Read More on TCPDF website](#)

This package is compatible with Laravel 4.* , 5.* , 6.* , 7.* and 8.*

This package relies on [php-gd](#) extension. So, make sure it is installed on your machine.

Installation

Begin by installing this package through Composer. Just run following command to terminal-

```
composer require milon/barcode
```

You can also edit your project's `composer.json` file to require `milon/barcode` .

```
"require": {  
    "milon/barcode": "^8.0"  
}
```

For Laravel 7.* use this-

```
"require": {  
    "milon/barcode": "^7.0"  
}
```

For Laravel 6.* use this-

```
"require": {  
    "milon/barcode": "^6.0"  
}
```

For Laravel 5.0 and 5.1 use this-

```
"require": {  
    "milon/barcode": "^5.1"  
}
```

For Laravel 4.0, 4.1 and 4.2 use this-

```
"require": {  
    "milon/barcode": "^4.2"  
}
```

Next, update Composer from the Terminal:

```
composer update
```

Once this operation completes, the final step is to add the service provider. Open `config/app.php` , and add a new item to the providers array.

```
'providers' => [
    // ...
    Milon\Barcode\BarcodeServiceProvider::class,
]
```

For version 4.* add these lines on app/config/app.php file-

```
'providers' => array(
    // ...
    'Milon\Barcode\BarcodeServiceProvider',
)
```

If you want to change Bar-code's settings (Store Path etc.), you need to publish its config file(s). For that you need to run in the terminal-

```
# Laravel 5.x
php artisan vendor:publish

# Laravel 4.x
php artisan config:publish milon/barcode
```

Make sure you have write permission to the storage path. By default it sets to /storage folder.

Now add the alias.

```
'aliases' => [
    // ...
    'DNS1D' => Milon\Barcode\Facades\DNS1DFacade::class,
    'DNS2D' => Milon\Barcode\Facades\DNS2DFacade::class,
]
```

For version 4.2 alias will be like this-

```
'aliases' => array(
    // ...
    'DNS1D' => 'Milon\Barcode\Facades\DNS1DFacade',
    'DNS2D' => 'Milon\Barcode\Facades\DNS2DFacade',
)
```

Bar-code generator like Qr Code, PDF417, C39, C39+, C39E, C39E+, C93, S25, S25+, I25, I25+, C128, C128A, C128B, C128C, 2-Digits UPC-Based Extention, 5-Digits UPC-Based Extention, EAN 8, EAN 13, UPC-A, UPC-E, MSI (Variation of Plessey code)

generator in html, png embedded base64 code and SVG canvas

```
echo DNS1D::getBarcodeSVG('4445645656', 'PHARMA2T');
echo DNS1D::getBarcodeHTML('4445645656', 'PHARMA2T');
echo '';
echo DNS1D::getBarcodePNGPath('4445645656', 'PHARMA2T');
echo '';
echo DNS1D::getBarcodePNGPath('4445645656', 'PHARMA2T',3,33);
echo 'setStorPath(__DIR__.' /cache/');  
echo $d->getBarcodeHTML('9780691147727', 'EAN13');
```
