

TCPDF reports “Undefined index: style” on single <hr> tag

Asked 1 month ago Active 1 month ago Viewed 192 times

A simple

```
$pdf->writeHTML("<hr>", true, false, false, false, '');
```

which did work when last tested (a few versions of TCPDF ago), now results in "Undefined index: style".

The relevant code from the TCPDF sources is

```
case 'hr': {
    if ((isset($tag['height'])) AND ($tag['height'] != '')) {
        $hrHeight = $this->getHTMLUnitToUnits($tag['height'], 1, 'px');
    } else {
        $hrHeight = $this->GetLineWidth();
    }
    $this->addHTMLVertSpace($hbx, max($hb, ($hrHeight / 2)), $cell, $firsttag);
    $x = $this->GetX();
    $y = $this->GetY();
    $wtmp = $this->w - $this->lMargin - $this->rMargin;
    if ($cell) {
        $wtmp -= ($this->cell_padding['L'] + $this->cell_padding['R']);
    }
    if ((isset($tag['width'])) AND ($tag['width'] != '')) {
        $hrWidth = $this->getHTMLUnitToUnits($tag['width'], $wtmp, 'px');
    } else {
        $hrWidth = $wtmp;
    }
    $prevlinewidth = $this->GetLineWidth();

    $this->SetLineWidth($hrHeight);
    $lineStyle = array(
        'color' => $tag['fgcolor'],
        'cap' => $tag['style']['cap'], // Error thrown here.
        'join' => $tag['style']['join'],
        'dash' => $tag['style']['dash'],
        'phase' => $tag['style']['phase'],
    );

    $lineStyle = array_filter($lineStyle);

    $this->Line($x, $y, $x + $hrWidth, $y, $lineStyle);
    $this->SetLineWidth($prevlinewidth);
    $this->addHTMLVertSpace(max($hbc, ($hrHeight / 2)), 0, $cell,
    !isset($dom[($key + 1)]));
    break;
}
```

The value of \$tag is

```
Array
(
    [elkey] => 0
    [tag] => 1
    [value] => hr
    [block] => 1
    [opening] => 1
    [parent] => 0
    [self] => 1
    [hide] =>
    [fontname] => dejavusans
    [fontstyle] =>
    [fontsize] => 10
    [font-stretch] => 100
    [letter-spacing] => 0
    [stroke] => 0
    [fill] => 1
    [clip] =>
    [line-height] => 1.25
    [bcolor] =>
```

```

        [G] => 0
        [B] => 0
    )

    [strokecolor] => Array
    (
        [R] => 0
        [G] => 0
        [B] => 0
    )

    [align] =>
    [listtype] =>
    [text-indent] => 0
    [text-transform] =>
    [border] => Array
    (
    )

    [dir] => ltr
    [attribute] => Array
    (
    )

)

```

As can be seen, there is no `style` key. Am I doing something wrong, or is this a bug in TCPDF? How can I work around it?

php tcpdf

At first glance, it might be a bug in TCPDF indeed. See how they run an `array_filter()` just after "Undefined index" errors trigger `E_notice` errors, which are left out in many PHP configurations.

I signed into GitHub to report an issue, and found it already reported: github.com/tecnickcom/TCPDF/issues/347 – [TRiG](#) Apr 9 at 16:26

Looks like it's already been fixed, but the fix hasn't hit stable yet. I could have just waited and this bug would have fixed itself. – [TRiG](#) Apr 9 at 16:28

As say [TRiG](#), it's a bug in TCPDF. If you have a look at the code, you'll see that TCPDF check if his parameters are existing, using `isset`. In the case of `hr` the `isset` test is missing for `style` (look line 18902 of version 6.4.1 and you'll see such a test for `height`) To avoid the problem you have 4 options:

1. use older TCPDF version which can't style `hr`
2. wait new version update
3. add an `isset` test in the code a bit like that:

```

// Line 18922
$a = isset($tag['style']['cap']);
if ($a== false)
{
    // Add here the default value you want
    $tag['style']['cap'] = "";
}

```

```
// The TCPDF code, using the values
$lineStyle = array(
    'color' => $tag['fgcolor'],
    'cap'   => $tag['style']['cap'],
    'join'  => $tag['style']['join'],
    'dash'  => $tag['style']['dash'],
    'phase' => $tag['style']['phase'],
);
```

4. Add a default style for *hr* at bottom of your HTML (easy solution!)
