How to run a PHP script using a custom PHP executable in Plesk Scheduled Tasks?

Miguel Monteiro
Updated 8 days ago

Follow (/hc/en-us/articles/115003610994-How-to-run-a-PHP-script-using-a-custom-PHP-executable-in-Plesk-Scheduled-Tasks-/subscription.html)

Applicable to: Plesk for Linux

Question

How to run a PHP script using a custom PHP executable in Plesk Scheduled Tasks?

Answer

1. Log into Plesk (<https://support.plesk.com/hc/en-us/articles/213413369-How-to-log-into-Plesk>).
2. Go to **Tools & Settings > Scheduled Task > Add Task**;
3. At **Script Path**, specify the full path to the PHP script on the server. If arguments are needed, specify that accordingly in the **with arguments** field;
4. At **Run** field, specify the desired frequency the task should be run;
5. Choose the **Run a PHP script** and set required version:

Home > Tools & Settings > Scheduled Tasks

Schedule a Task

☒ Active

Task type

- ☐ Run a command
☐ Fetch a URL
☒ Run a PHP script

Script path *

with arguments

Specify the full path to the script. Example: /tmp/script.php

Use PHP version

7.0.27

Run

Daily at 00 : 00

System user

root

Description

Notify

- ☒ Do not notify
☐ Errors only
Notifications contain the standard error stream of the command. If the stream is empty, no notification is sent.
☐ Every time
Notifications contain the command output. If the output is empty, no notification is sent.

* Required fields

Run Now

OK

Cancel

(https://support.plesk.com/hc/article_attachments/360000699293/A_script.PNG)

6. Click **OK** to save the task.

Note: Alternatively, it is possible to do it via the **Run a command** option on the same screen. However, this is not recommended way due to security reasons as the script will be running under **/bin/bash** privileges.

1. Create a task with the type **Run a command** and specify the full path to custom PHP executable. Specify other settings if required.

(https://support.plesk.com/hc/article_attachments/115004749034/Screenshot-2017-12-3_Schedule_a_Task_-_Plesk_Onyx_17_5_3.png)

2. Go to **Tools & Settings > Scheduled Tasks > Settings** and set the option **Crontab shell** to `/bin/bash`.

3. Apply the changes.

Note: it is also possible to do it per domain via **Domains** > **example.com** > **Scheduled Tasks**.
