Follow (/hc/en-us/articles/115003372214-How-to-set-up-a-task-to-be-executed-every-X-minutes-on-a-Plesk-server-/subscription.html)

Applicable to: Plesk for Linux Plesk for Windows

Question

How to set up a task to be executed:

- every minute
- every 2 minutes
- every 5 minutes
- every 30 minutes

on a Plesk server?

Answer

The cron format for setting time of the task execution can be used.

1. Log in to Plesk (<https://support.plesk.com/hc/en-us/articles/213413369>).
2. Go to **Tools & Settings > Scheduled Tasks**, press the **Add Task** button to create a new task or click the already existing task.
3. Select the **Cron style** in the drop-down menu opposite the **Run** directive:

(https://support.plesk.com/hc/article_attachments/360032029554/screenshot.png)

4. Specify the required time in the cron format:

Note: using the "/" character is not allowed in Windows.

Instead of this, it's required to place a comma-separated list for each execution time.

If you try to use the "/" character, the next error will appear:

"Invalid crontab syntax"
